

THE AGILIS READER

To complement our proven assay development and manufacturing services, we are proud to have launched our diagnostic reader. This pairing delivers the market requirement of a rapid, ultra-sensitive, fully quantitative PoC test for use across a wide range of clinical and non-clinical applications.

The multi-application capability of the new Agilis Reader will see it meeting many challenges faced by the healthcare industry such as:

Reader Benefits

- Rapid and quantitative
- Near patient results - portable
- Value adding for clinicians
- Fully connected
- Can easily be added to exiting workflows
- Quality controlled
- Accurate

The AgPlus Platform

Our Platform offers a fully quantitative, accurate, rapid diagnosis for Point of Care and consists of an assay test cartridge and our Agilis Reader for delivering rapid, quantitative diagnostic results. Our assays are developed as a two-step, single use test that simply requires the addition of the sample on to the cartridge. The assay is then inserted into The Agilis Reader for the analyte measurement and analysis to take place.

Assay Development and Manufacturing

If your organisation is looking for enhanced competitive edge or to bring a new diagnostic product to the market, our approach to assay development could enhance your business.

In addition to our assay development expertise, we also work to custom manufacture assays on an OEM basis, meaning we supply a quality assured product under client brand.

Assay Development Phases

Assay development with AgPlus can typically be segmented into five key phases:
